SWEeper

VP70

DEVELOPED FOR PADEL COURTS
68 CM SWEEPING WIDTH
BATTERY POWERED
MANUAL EMPTYING OF THE DUSTBIN

UNIQUE SWEEPER FOR PADEL COURTS

The Meijer VP70 is a walk-behind sweeper, specifically designed for the maintenance of padel courts. This machine makes it easier and more efficient to keep both the courts themselves and the surrounding areas clean. Thanks to its compact design, the VP70 is ideal for precise sweeping on smaller surfaces.

Protection against wall damage

The VP70 is equipped with convenient roller wheels on the bumper, allowing the machine to operate close to walls without the risk of damage. Its compact size ensures that it fits through all doorways. This makes the machine ideal for use around the glass walls of padel courts, where a gentle approach is essential.

Improved stability on artificial grass

To optimize maneuverability on artificial grass, the VP70 is equipped with wider wheels than the standard version. This ensures better grip and control during sweeping, which is essential for an even cleaning of the field without damaging the grass. This machine is suitable for use on all types of artificial grass used for padel courts.

THIS SWEEPER IS PARTICULARLY SUITABLE FOR:

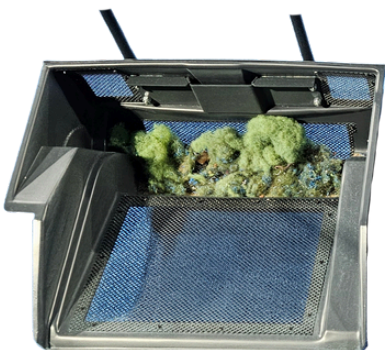

- ✓ Leaves
- ✓ Twigs / small debris
- ✓ Pebbles
- ✓ Ball fuzz
- ✓ Gravel (from paving)

Castor wheels on the bumper

Dustbin with mesh for sand filtration

Dustbin full of ball fuzz

Flexible debris removal and sand distribution

The Meijer VP70 comes with two debris containers: a closed container and a mesh container. The mesh container allows leaves, twigs, and ball fuzz to be collected while letting sand fall back onto the court. This helps preserve the sand layer and contributes to an even distribution of sand. As a result, the VP70 is highly versatile for use on and around the courts.

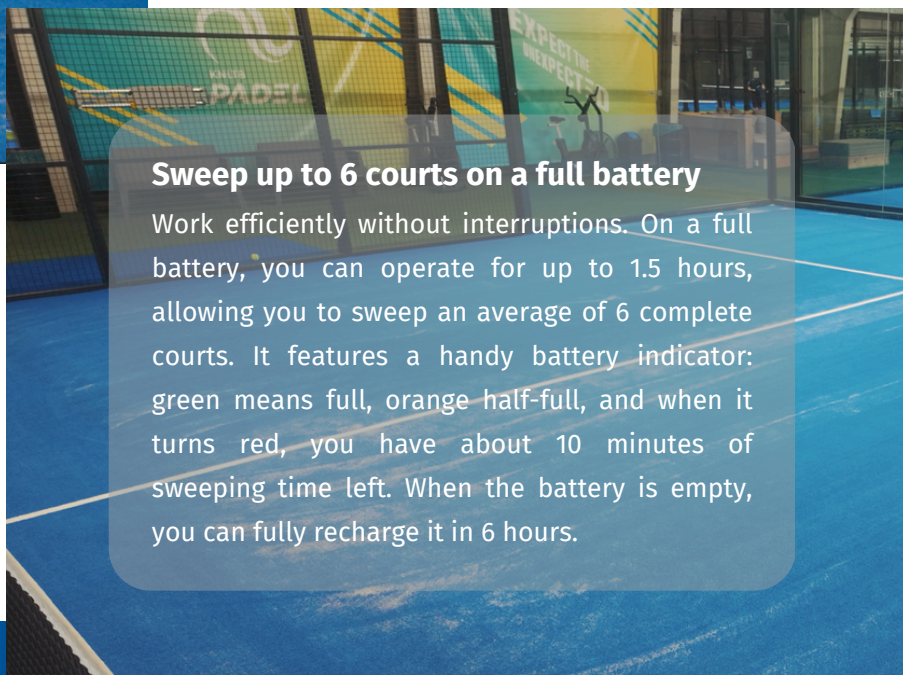

Time-saving maintenance

With the VP70, maintenance of padel courts is significantly more efficient compared to manual upkeep. You can sweep an entire court within minutes. This allows volunteers to spend more time on other important tasks within the club while ensuring that the courts remain consistently clean and playable. Another fun fact: the machine is electrically powered, so you don't have to push it yourself. This ensures minimal strain on the user.

Fits through any doorway

The Meijer VP70 is designed for maximum maneuverability and flexibility. With a width of just 70 cm and a small turning radius, it effortlessly navigates through narrow passages and tight spaces. Ideal for use on padel courts, but also perfectly suited for the rest of the sports complex – from the clubhouse to the parking lot. Thanks to its compact and efficient design, you can work faster and more easily, without compromising on power and performance.

Sweep up to 6 courts on a full battery

Work efficiently without interruptions. On a full battery, you can operate for up to 1.5 hours, allowing you to sweep an average of 6 complete courts. It features a handy battery indicator: green means full, orange half-full, and when it turns red, you have about 10 minutes of sweeping time left. When the battery is empty, you can fully recharge it in 6 hours.

Experience the Meijer VP70 for yourself

A clean and well-maintained padel court is essential for play quality and safety. With the VP70, you can quickly and easily maintain the courts—without causing any disturbance and without damaging the cage. And since it can also be used outside the court, you can enhance the overall appearance of the entire sports complex with just one machine. The perfect solution for any padel club.
